### Education

- LL.M., in Trial Advocacy, Temple University Beasley School of Law, *cum laude*, 1999
- J.D., University of Miami School of Law, *cum laude*, 1993
- B.B.A., (Computer Science Minor), Temple University Fox School of Business, *summa cum laude*, 1980

### Employment

- EDS/Eastern Airlines, Computer Systems Analyst, Computer Operations, 1985 - 1993

Donald O. Johnson, J.D., LL.M., CPCU is uniquely positioned to help companies that possess large amounts of electronically-stored information develop and implement a system for complying with their complex electronic discovery demands in a cost effective manner. He similarly can help litigants locate opposing parties' relevant electronically-stored information .

Don worked for two years as a computer operator and seven years as a computer systems programmer and computer systems analyst for large international companies. His systems analyst duties included ensuring that the companies' multi-processor computer systems remained operational twenty-three and a half hours a day, seven days a week. This required him to understand which application and systems programs were loaded to the computer systems each day and to ensure that the systems functioned properly or to diagnose and fix all consequential errors within minutes or remove the problem programs from the systems immediately. To carry out these duties, he interfaced with multiple application programming departments, the computer systems programming department, the database department, the test systems department, and the computer operations department.

Equally important, Don has more than 14 years of legal experience practicing in a large national firm, which included single-handedly working with the IT department personnel of one of the largest United States retailers to identify potentially discoverable electronically-stored information in a multi-year case concerning the functioning of the company's various operational and legacy computer systems and the development of the operational computer systems. He used his computer operations, programming, and systems analyst experience to interview (as well as prepare for depositions and defend) personnel from the applications programming, computer systems programming, database, computer networking, e-mail systems, test systems, disaster recovery, and computer operations departments. He used his legal and computer experience to reach cost-effective form of production agreements and to supervise a team of attorneys who identified privileged documents.

Don has an unusually thorough understanding of litigation needs, having earned a Master's degree in Trial Advocacy with honors from Temple University's Beasley School of Law, which is widely-recognized as having one of the leading trial advocacy programs in the country.
